Micro homes room for just one!

1.....

How would you feel about living in a house that was only 2.6m long by 2.6m wide by 2.6m high? Well, in Europe some people are doing just that. Micro compact ('m-ch') homes are very small homes that are no bigger than the size of a small room!

2.....

So how do you fit not just a sleeping and living area, but also a study and bathing area into a space that is only 2.6m³? Well, in m-ch homes, each area has more than one uses, because you can change the place of the seats, beds and kitchen appliances. So, the dining area (which is also the study area) becomes a sleeping space by sliding the dining table into a wall. And the entrance way doubles as a bathroom - the front door becomes the shower door!

3.....

The company that makes these tiny homes says that they designed them to solve the difficulty many Europeans have in getting their own home. Too many people cannot afford accommodation in Europe and these low-cost homes are perfect for someone who wants a place where they can live for a short time.

4.....

The first people to try living in m-ch homes were university students. Students love them because although small, they are very modern with flat screen TVs and comfortable furniture.

5.....

So what's 'micro living' like? Well, you have to be a very neat, tidy and organized person, because in order to do one thing, you have to first finish another and put everything away. Also, the lack of space means you can't have many personal items. But if you want a cheap, cosy, modern space that you can call your own, a micro home may be for you

Nature's joke? - the strange and wonderful PLATYPUS

The platypus is a strange little creature found only in Australia. When the first platypus was sent to Europe in the 19th century, the scientists who examined it just could not believe their eyes. They believed the platypus was a joke, **1**) They thought some fun-loving Australian had put the feet and nose of a duck onto the body of a rat, **2**).....

But platypuses are real, **3**) Platypuses have a nose like a duck, webbed feet like a duck, soft brown fur on their body and a long, flat tail like a beaver. As if that weren't strange enough, even though they are mammals (which means they feed their babies milk), platypuses don't give birth to live babies **4**)! No wonder scientists couldn't decide for a very long time if platypuses were birds, reptiles or mammals.

But the platypus has even more wonderful characteristics. Platypuses find their food in rivers by using electric fields. And, if they are in danger, male platypuses have sharp hooks on their feet **5**) It's no surprise then, that this special, shy little animal is one of Australia's most famous creatures. A picture of the platypus appears on the Australian 20 cent coin. Australians are very proud of their unique platypus.

For thousands of years human beings have dreamt of cheating death and the aging process. In their fantasy world, they live forever and remain young and beautiful in old age. Well, it may sound incredible, but there are some scientists who believe that mankind will soon have the technology to make this dream come true!

2.....

Sounds like science fiction? Maybe. But remember that technology gives us the ability to do things today that people living only a few decades ago would have considered magic. Therefore, there is no reason why we shouldn't believe that experts will make all this possible.

3

Some scientists believe that medical technology is moving so fast that by the end of this century, advanced anti-aging technologies will be available, and it will let people live for hundreds or maybe even thousands of years if they want to. Of course few people would want to live

to 1000 if, they had to spend hundreds of years looking and feeling like a 90-year-old. But some researchers think medicine will be able to keep people looking and feeling as beautiful and fit at 500 years old as they were at the age of 25!

4

Naturally, the possibility of living 50 long raises many problems if people don't die, how will the Earth cope when it gets so overcrowded? Many people believe that scientists should not develop anti-aging technology, and that they should let nature take its course as it has been doing for millions of years.

5

Of course, most scientists believe that humans will never possess such technology. But if living to 1000 becomes possible, do you think it would be a dream ... or a nightmare? And, if you had the choice, would you choose to live forever?

1

For thousands of years human beings have dreamt of cheating death and the aging process. In their fantasy world, they live forever and remain young and beautiful in old age. Well, it may sound incredible, but there are some scientists who believe that mankind will soon have the technology to make this dream come true!

2

Sounds like science fiction? Maybe. But remember that technology gives us the ability to do things today that people living only a few decades ago would have considered magic. Therefore, there is no reason why we shouldn't believe that experts will make all this possible.
